

The background features a teal gradient with a subtle grid pattern. On the left side, there are silhouettes of several people standing in a row. In the foreground, there is a semi-transparent image of a globe showing the outlines of continents.

# How does FinPricing Manage Market Data?

**FinPricing**

Market data is a broad term for trade-related data. It encompasses a range of information such as price, bid/ask quotes and market volume for financial instruments. Financial firms, traders and investors require such data to execute trades. Market data is generated in real time, which means that it can be used to make quick but informed trading decisions. In the meantime, historical market data are a crucial part of technical analysis, and can be used to project pricing trends and to calculate risk.

Trading venues provide reports on various assets and financial instruments, which are then distributed to traders and firms. Market data is available across thousands of global markets, including stocks, indices, fixed-income, interest rates, derivatives, forex and commodities. The aim of using market data is to get as much information about the asset you are planning to trade, in order to calculate risk and the impact of live news releases.

# Summary

- How to load/modify market data associated with a trade in FinPricing?
- How to load/modify market data manually in FinPricing?
- How to local bulk market data in FinPricing?

### How to load/modify market data associated with a trade?

- In finance, market data is associated with investment instruments or trades.
- After creating a new trade or loading an existing trade (see details at <http://www.finpricing.com/faq/tradeLifecycle.html>), click the Market Data tab that is beside the Trade Detail tab. Then the user can either click the New button to input new market data or the Load button to extract the existing market data.
- If the user chooses to input new market data by specifying the Valuation Date and then clicking the New button, the system knows what kind of market data needed for this trade and thus generates market data templates displayed in the main window.

## How to load/modify market data associated with a trade? (Cont'd)

- After filling the market data and then clicking the Save button, an OK windows pops up if all data are in correct formats and value types. That means the new market data are saved into the system and ready to use.
- Please note that FinPricing provides some market data to users. However, a user feels free to modify or provide their own market data. Those new or modified market data will be private to the user.

The screenshot shows the FinPricing Enterprise application window. The menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. On the left, there's a tree view under Product with categories like InterestRateProduct, FixedIncomeProduct (with Bond and Callable Bond), MoneyMarketProduct, EquityProduct, and ForeignExchangeProduct. The main area has tabs: Pricing, Trade Detail, Market Data (which is selected and highlighted with a red box), Results, and Cash Flows. Below these tabs are buttons for New, Load, and Save, with Save also highlighted with a red box. A Valuation Date field shows 6/26/2018. A large table below contains columns labeled Column0 through Column10. The first row has headers: Column0, Column1, Column2, Column3, Column4, Column5, Column6, Column7, Column8, Column9, and Column10. Subsequent rows show data for USD\_3M, including Currency (USD), Valuation Date (6/26/2018), Base Curve (USD\_3M), CurveName (USD\_3M), QuoteName (USD\_3M), InstrumentType (Future), Term (▼), Value (0), MarketQuote (912828XN8), Value (100), Type (Bond), and Currency (USD). There are several more rows of similar data below.

Column0	Column1	Column2	Column3	Column4	Column5	Column6	Column7	Column8	Column9	Column10
USD_3M	Base Curve						MarketQuote	6/26/2018		
Currency	ValuationDate	CurveName	QuoteName	InstrumentType	Term	Value	Name	Value	Type	Currency
USD	6/26/2018	USD_3M		Future	▼	0	912828XN8	100	Bond	USD
USD	6/26/2018	USD_3M		Future	▼	0				
USD	6/26/2018	USD_3M		Future	▼	0				
USD	6/26/2018	USD_3M		Future	▼	0				
USD	6/26/2018	USD_3M		Future	▼	0				
USD	6/26/2018	USD_3M		Future	▼	0				

## How to load/modify market data associated with a trade? (Cont'd)

- If user chooses to load existing market data by inputting a Valuation Date (say, 2/8/2018) and then clicking the Load button, a selection form appears in the main window. The user can select a date from pull-down menus. If all available dates are not what he wants, just select NA (not available). Then click the Extract button at the right of the row.
- Note: the valuation date and the market data date are allowed to be different as sometimes a user conducts what-if analysis at a start-of-day (SOD), when the new market data are still not available. In that case, the user can use yesterday's data.

## How to load/modify market data associated with a trade? (Cont'd)

The screenshot shows the FinPricing Enterprise application window. The top menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. A sidebar on the left is titled 'Product' and lists categories: InterestRateProduct, FixedIncomeProduct (with sub-options Bond and Callable Bond), MoneyMarketProduct, EquityProduct, and ForeignExchangeProduct. The main area is titled 'Pricing' and contains tabs for Trade Detail, Market Data, Results, and Cash Flows. Below these tabs are buttons for New, Load (circled in red), and Save. A 'Valuation Date' field shows '2/8/2018' (also circled in red). The 'Market Data' tab is active, displaying a table with columns Column0, Column1, Column2, Column3, and Extract Data. The table has two rows: one for 'Interest Rate Curve' and another for 'Base'. The 'Base' row contains cells with '2/8/2018' (highlighted with a red box), '912828XN8', 'NA', and 'Extract' (circled in red). A dropdown menu for 'Base' shows dates from 2/8/2018 down to 1/25/2018. The bottom part of the screenshot shows a large gray area.

	Column0	Column1	Column2	Column3	Extract Data
Interest Rate Curve					Extract
► Base	2/8/2018	912828XN8	NA	Extract	
*	2/8/2018				
	2/7/2018				
	2/6/2018				
	2/5/2018				
	2/2/2018				
	2/1/2018				
	1/31/2018				
	1/30/2018				
	1/29/2018				
	1/26/2018				
	1/25/2018				

## How to load/modify market data associated with a trade? (Cont'd)

- The market data on 2/8/2018 are loaded in the main window. Again the user can modify and save the market data.

The screenshot shows the FinPricing Enterprise application window. The menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. The left sidebar displays a tree view of products: Product (Interest Rate Product, Fixed Income Product, Bond, Callable Bond, Money Market Product, Equity Product, Foreign Exchange Product). The main area has tabs for Pricing, Trade Detail, Market Data, Results, and Cash Flows. The Pricing tab is active, showing a 'Save' button highlighted with a red oval. Below it is a table with columns: Column0, Column1, Column2, Column3, Column4, Column5, Column6, Column7, Column8, Column9, Column10. The first row contains 'USD\_3M' and 'Base Curve'. Subsequent rows show currency, valuation date, curve name, quote name, instrument type, term, value, name, value, type, and currency. A specific row for USD on 02/08/2018 is selected, showing values like 97.257, 97.4659, 97.8551, etc. The status bar at the bottom indicates 'Internal'.

Column0	Column1	Column2	Column3	Column4	Column5	Column6	Column7	Column8	Column9	Column10
USD_3M	Base Curve						MarketQuote	2/8/2018

## How to load/modify market data associated with a trade? (Cont'd)

- After either new market data saved or existing market data loaded, the user can click the Pricing button. The calculation results will be presented in the Results tab.

The screenshot shows the FinPricing Enterprise application window. The menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. A sidebar on the left lists Product categories: Interest Rate Product, Fixed Income Product (with sub-options Bond and Callable Bond), Money Market Product, Equity Product, and Foreign Exchange Product. The main area displays a table with tabs at the top: Trade Detail, Market Data, Results (which is highlighted with a red circle), and Cash Flows. The table has columns for Column 1, Column 2, and Column 3. The first row shows 'FIBond' in Column 1 and 'USD' in Column 2. Subsequent rows provide detailed information for each bond, including Category, General fields like Name, TradeId, ValuationDate, Position, MTM, and Cash; and Delta values for various future dates ranging from Mar-16-20 to SWAP 7Y. The table continues with many more rows of similar data.

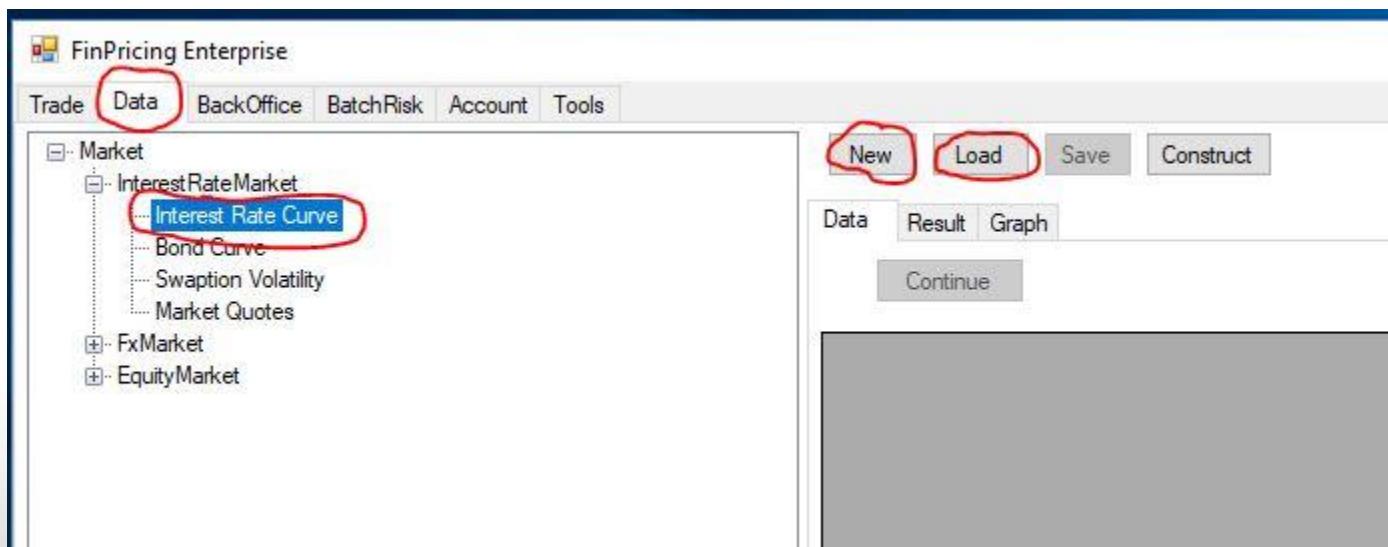

Column 1	Column 2	Column 3
FIBond	USD	
Category	Name	Value
General	TradeId	T000000120040000044
General	ValuationDate	2/8/2018 12:00:00 AM

### How to load/modify market data associated with a trade? (Cont'd)

- Sometimes, bond prices are available (quoted) in the market. If the bond price is provided, FinPricing will match the model price to the market price by calibrating a credit spread that reflects credit risk and liquidity risk.
- If the market bond price is not given, FinPricing will compute the model price only based on the discount and/or forecast curves provided.
- FinPricing calculates sensitivities or Greeks based on market observable and liquid instruments, such as LIBOR rates, Eurodollar futures, and swap rates. This is the best market practice and convention as hedge and risk analysis are based on market observables. Most trading systems in the market compute Greeks relying on zero-rates, which is an easy way for convenience.
- To compute Greeks on market instruments, system/model needs to shock each instrument and then reconstruct curve one by one. The calculation is much more complex and time-consuming. But trickery cannot be used to gain advantage.

## How to load/modify market data manually?

- Click the Data tab at the top-left corner of the application. Then, expand Market -> particular market (e.g., Interest Rate Market) and select a market data set (e.g., Interest Rate Curve) .
- After that, you can either click the Load button to load an existing market data set for review/modification or the New button to generate new market data.

## How to load/modify market data manually? (Cont'd)

- If you click the Load button, a selection window pops up. Expend Data -> InterestRateCurve -> Currency (e.g., USD) and select a curve (e.g., USD\_3M). The list of the available market dates of USD\_3M is displayed in the main windows

The screenshot shows a Windows application window titled "Selection - FinPricing Enterprise". At the top, there are three buttons: "New" (circled in red), "Load" (circled in red), and "Delete". Below the buttons is a tree view under the "Data" node, specifically under the "InterestRateCurve" node for the "USD" currency. The tree structure includes: AUD, CAD, CHF, CNH, CNY, DKK, EUR, GBP, HKD, JPY, MXN, NOK, NZD, SEK, SGD, and USD. Under the USD node, there are several sub-nodes: USD\_12M\_BASIS, USD\_1M\_BASIS, USD\_3M\_BASIS (which is highlighted with a blue rectangle and circled in red), USD\_FEDFN\_BASIS, USD\_OIS, USD\_PRIME\_BASIS, and USD\_SIFMA\_BASIS. To the right of the tree view is a table titled "ValuationDate" with a list of dates from 06/26/2018 down to 01/17/2018.

ValuationDate
06/26/2018
02/08/2018
02/07/2018
02/06/2018
02/05/2018
02/02/2018
02/01/2018
01/31/2018
01/30/2018

01/26/2018
01/25/2018
01/24/2018
01/23/2018
01/22/2018
01/19/2018
01/18/2018
01/17/2018

## How to load/modify market data manually? (Cont'd)

- Select a date and then click the Load button. The market data of that valuation date are displayed in the main windows. You can modify the data and click the Save button to save all the changes.

The screenshot shows the FinPricing Enterprise software interface. The top menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. The main window has a toolbar with New, Load, Save (which is highlighted with a red circle), and Construct buttons. Below the toolbar is a navigation pane with a tree view showing Market, InterestRateMarket (with sub-items: Interest Rate Curve, Bond Curve, Swaption Volatility, Market Quotes), FxMarket, and EquityMarket. To the right of the navigation pane is a data grid with tabs for Data, Result, and Graph. The Data tab is selected, showing a table with columns: Column0, Column1, Column2, and Column3. The table rows show data for USD\_3M, Currency, ValuationDate, CurveName, and QuoteName. The data in the table is as follows:

Column0	Column1	Column2	Column3
USD_3M	Base Curve		
Currency	ValuationDate	CurveName	QuoteName
USD	02/08/2018	USD_3M	USD_STUB: CASH
USD	02/08/2018	USD_3M	USD_STUB: FUTURE Mar...
USD	02/08/2018	USD_3M	USD_STUB: FUTURE Mar...

USD	02/08/2018	USD_3M	USD_STUB: FUTURE Jun...
USD	02/08/2018	USD_3M	USD_STUB: FUTURE Jun...
USD	02/08/2018	USD_3M	USD_STUB: FUTURE Sep...
USD	02/08/2018	USD_3M	USD_STUB: FUTURE Sep...

## How to load/modify market data manually? (Cont'd)

- Or if you click the New button, a selection template form is displayed in the main windows.
- Input Currency and Curve Data, and select Curve Type and Basis Type (if applicable). Then click Continue button at the end of each row.

The screenshot shows the FinPricing Enterprise application window. The menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. The Data tab is selected. On the left, a tree view shows Market, InterestRateMarket (with Interest Rate Curve selected), Bond Curve, Swaption Volatility, and Market Quotes; FxMarket and EquityMarket are also listed. In the center, there are four buttons: New (circled in red), Load, Save, and Construct. Below them are tabs: Data (selected), Result, and Graph. A Continue button is located below the tabs. To the right is a data entry grid:

	Column0	Column1	Column2	Column3	Column4	Column5	Column6	Column7	Continue Button
▶	IrCurve	InputCurrency	Type	SelectType	Date	InputDate	Basis	SelectBasisType	Continue
	Currency	USD	Curve Type	Base	Curve Date	M/d/yyyy	Basis Type	NA	Continue
*									

## How to load/modify market data manually? (Cont'd)

- A new market data template is shown in the main window. Fill all fields and click the Save button. The new market data are generated.

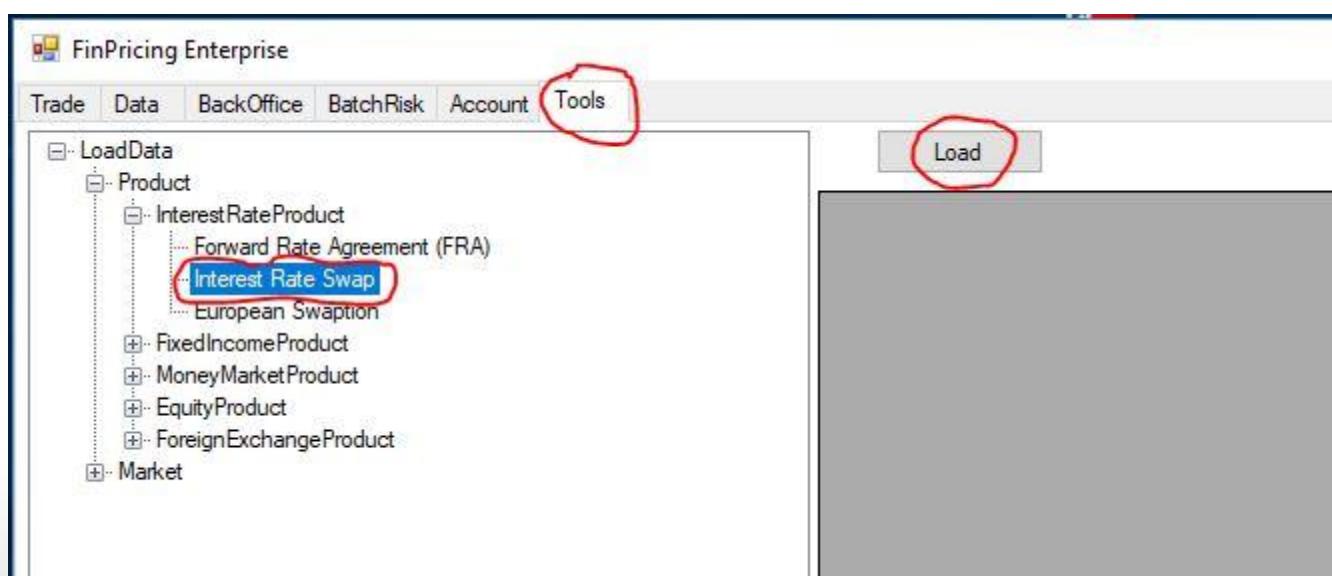

The screenshot shows the FinPricing Enterprise software interface. The top menu bar includes File, Trade, Data, BackOffice, BatchRisk, Account, and Tools. The 'Data' tab is selected. A toolbar below the menu contains New, Load, Save (which is highlighted with a red circle), and Construct buttons. To the left, a tree view shows the Market structure: Market (InterestRateMarket: Interest Rate Curve, Bond Curve, Swaption Volatility, Market Quotes; FxMarket; EquityMarket). Below the tree is a table with columns: Column0, Column1, Column2, Column3, Column4, Column5, and Column6. The first row is highlighted in blue and labeled 'USD\_3M'. The second row is green and labeled 'Currency'. Subsequent rows show data for USD and IISD currencies across various columns. A large red oval highlights the bottom right corner of the table area, where several 'Future' dropdown menus are visible.

Column0	Column1	Column2	Column3	Column4	Column5	Column6
USD_3M	Base Curve					
Currency	ValuationDate	CurveName	QuoteName	InstrumentType	Term	Value
USD	2/9/2018	USD_3M		Future	▼	0
USD	2/9/2018	USD_3M		Future	▼	0
USD	2/9/2018	USD_3M		Future	▼	0
USD	2/9/2018	USD_3M		Future	▼	0
USD	2/9/2018	USD_3M		Future	▼	0

IISD	2/9/2018	IISD_3M		Future	▼	0

### How to local bulk market data?

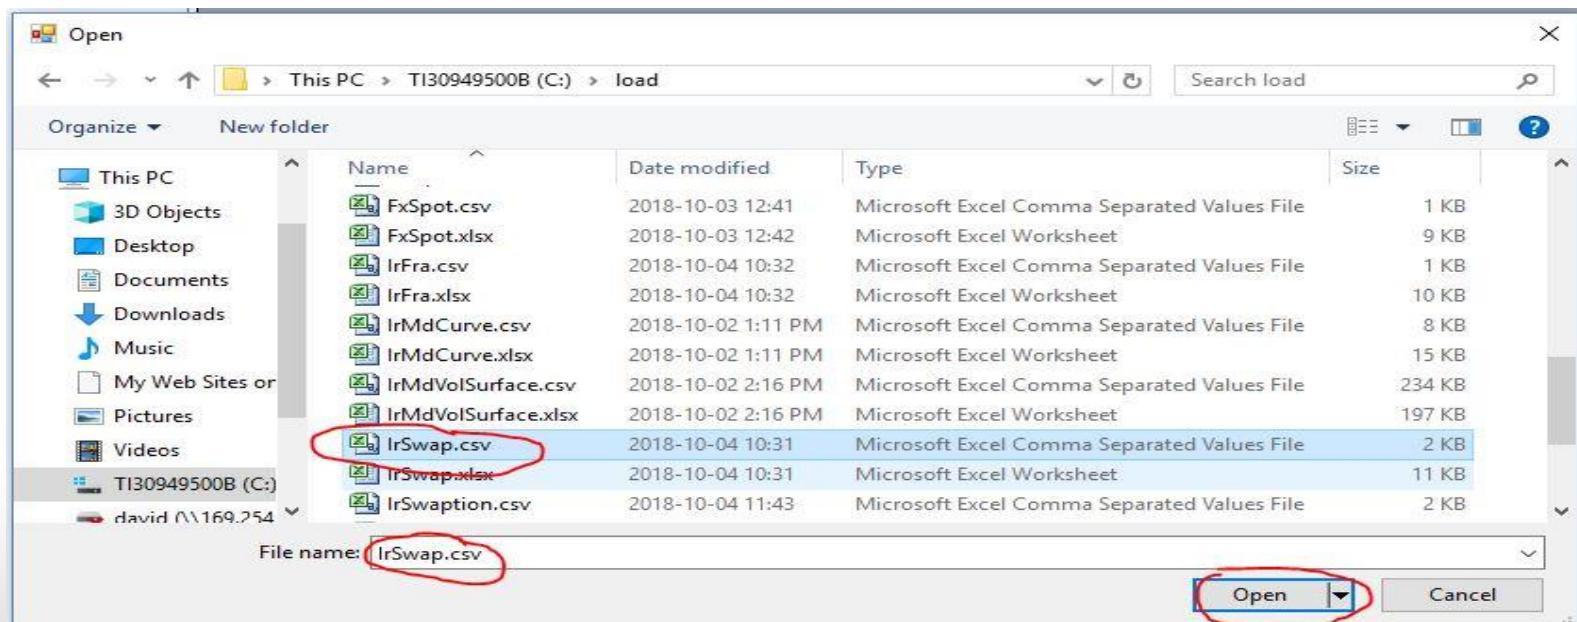

- Click the Tool tab at the top-left corner of the application. Next, expend Product -> InterestRateProduct (for example). Then, select the Interest Rate Swap.

## How to local bulk market data? (Cont'd)

- Next, click the Load button. A window pops up allowing users to browse the local folders and select files.
- After selecting a bulk trade file that is in csv format, click the Open button.

## How to local bulk market data? (Cont'd)

- FinPricing starts to load all the trades defined in the file. Finally a summary table is displayed in the main window telling you how many trades are successfully loaded and how many of them fail.

The screenshot shows the FinPricing Enterprise application window. The menu bar includes Trade, Data, BackOffice, BatchRisk, Account, and Tools. On the left, a tree view under 'LoadData' shows categories like Product (InterestRateProduct, FixedIncomeProduct, MoneyMarketProduct, EquityProduct, ForeignExchangeProduct) and Market (InterestRateMarket, FxMarket, EquityMarket). A red oval highlights the 'Load' button at the top right of a central table. The table has columns for Trade Count, Load Status, and Error. All five rows show a count of 1, status of Success, and no error.

Trade Count	Load Status	Error
1	Success	
2	Success	
3	Success	
4	Success	
5	Success	
*
